FOREWORD

Interest in education improvement and renewal which heightened during the early 1980s continues to capture the attention of researchers, policymakers, and the public. While much has been done to enhance public education programs and services, much work and many challenges remain. In this setting, NEA Research offers *Rankings of the States, 1986* to its state and local affiliates as a tool for use throughout this period of public school reform.

Rankings of the States provides state-level data on an array of topics relevant to the complex enterprise of public education. State-by-state figures on government and school financing, state demographics, and public school personnel permit a statistical assessment of the scope of public education and an identification of emerging trends in key areas.

The *Rankings* report enjoys a long history of use by affiliates of the NEA as well as by planners and policymakers in other organizations. It has, since the 1960s, presented facts and figures useful in determining where states vary from one another or from national averages on selected statistics, and explanations as to how the reported data reflect social and economic characteristics and changes. Of course, no one table or set of them can tell the entire story of a state's education offerings. One must consider a state's tax system, its provision of other public services, the characteristics of its population, and more. It is therefore unwise to draw conclusions solely from the tables in this report, and the reader is urged to supplement these rank-ordered data with specific information about state and local activities and services related to public education.

Please note that the content of the A Series is different from that of previous years. Additional information about this change appears in the Technical Notes.

State department of education staff who contributed to this report deserve much credit for the current public school data it presents, as do the state education associations across the country.

NEA Research

August 1986

TECHNICAL NOTES

Rankings of the States, 1986 contains rank-ordered statistics for the fifty states and the District of Columbia. All state data are ranked beginning with the largest figure. When the values of two or more states are the same, they are assigned the same rank, with the appropriate number resumed with the next state in rank.

Please note that *Rankings of the States, 1986* features revised figures for some public school data previously published in *Estimates of School Statistics, 1985-86,* another report of NEA Research published in April 1986. State education agencies were invited to review their fall 1985 estimates and revise them for inclusion in this report. For this reason, estimated data in B, C, F, and H Series may differ from those in *Estimates of School Statistics.*

When necessary, NEA Research develops estimated data for tables appearing in Series B, C, F, and H Tables. Please note these instances in the pages immediately following the Series.

This edition of *Rankings of the States* reflects the absence of selected federal government data sources, most notably, age-group estimates of resident population by state usually featured in the A Series Tables. The Bureau of the Census did not develop those data in time for their use in *Rankings*, reportedly due to budgetary restrictions resulting from the Balanced Budget and Emergency Deficit Reduction Law of 1985, better known as the Gramm-Rudman-Hollings amendment. For this reason, tables in the A Series are fewer in number and scope. For example, state-by-state estimates for population age 5-17, age 65 and over, and age 21 and over are not presented in this year's report. Also, enrollment and staffing information for higher education institutions are not included in this edition of *Rankings of the States*, affecting tables in the B and C Series. While every effort has been made to obtain current information, the availability of data from federal government and other sources dictates the presence or absence of certain tables in this report.

One other change to be noted in this edition of *Rankings of the States* involves tables featuring Average Daily Membership (ADM). These tables will no longer contain values for the U.S. as a whole, since five states do not compute or provide estimates for their statewide ADM. Previously, totals and/or averages for the U.S. ADM were estimated by NEA Research based on the forty-four state values plus the District of Columbia. Beginning with this edition of *Rankings*, the U.S. totals or computations for ADM will show "NA." Tables affected by this change include: B-5, B-6, H-14 and H-15.

Tables D-14 and D-15 feature data from the *Sales and Marketing Management Survey of Buying Power*, a copyrighted work. Reproduction of these tables is prohibited unless permission is obtained directly from Sales and Marketing Management, 633 Third Avenue, New York, New York, 10017.

GLOSSARY 58

INDEX 61

POPULATION

Tables in the A Series provide information about the population of states, and can serve as indicators of the relative demand for public education services or other public programs.

The level and change in total state population are featured in Tables A-1 through A-4, and help to identify patterns of growth or decline for each state, and the resulting implications for staffing and financing public education institutions. Population density is computed in Table A-7, while the number of births by state is the focus of A-5 and A-6.

Population data normally presented in this Series, specifically, state age-group estimates, are not included this year due to delays in the Bureau of the Census. The absence of these age-group estimates is unfortunate, as they provide a great deal of information about state population characteristics and the likely demand for public education services and other programs. Readers are referred to the 1985 edition of this report for 1984 age-group estimates by state.

A-1. TOTAL RESIDENT POPULATION, 1984 (IN THOUSANDS)

1.	CALIFORNIA	25,622

ENROLLMENT, ATTENDANCE, AND MEMBERSHIP

Tables in the B Series feature data on student participation in public elementary and secondary schools. The tables include current statistics on pupils enrolled, and the change in enrollment over the previous year and over a decade. These tables enable assessments of the states which can expect to experience increasing demand for public school services and staff.

Alternative measures of public school participation also are included in this Series. Average Daily Attendance (ADA) and Average Daily Membership (ADM) are presented in Tables B-4 through B-7, and differ from fall enrollment counts in that they present averages of pupil participation *year round*. Departments of education in five states do not provide data for ADM, and these instances are identified as "NA" in Tables B-5 and B-6, and throughout other Series as appropriate. Also, there are no U.S. totals or computed averages using ADM, as national figures for this measure cannot be considered to represent totals or averages for all states.

Table B-8 shows the percent change in the number of high school graduates over a five-year period, useful in predicting demand for higher education services in future years.

Footnotes to the B Series tables note the instances where the NEA has had to formulate estimates of public school statistics, in the absence of estimated data from state education departments.

B-1. NUMBER OF BASIC ADMINISTRATIVE UNITS (OPERATING PUBLIC SCHOOL DISTRICTS), 1985-86

NOTES TO B SERIES TABLES

NEA Research estimates for selected variables within the B Series are identified below by state and by table number. NEA estimates appear in those cases where state education departments did not respond to requests by NEA Research for estimates of school statistics.

Alaska	B-4 through B-7
California	B-8
District	B-8
Louisiana	B-4 through B-7
Nevada	B-4, B-6, B-7
Oklahoma	B-4 through B-7
Pennsylvania	B-4 through B-7
Wisconsin	B-4 through B-7

FACULTY

Personnel in local public schools and in public institutions of higher education are the focus of tables in the C Series. Changes in the number of staff employed in education institutions as well as their levels of compensation reflect trends in enrollment, economic trends, and in the program priorities expressed by state residents.

The number of staff employed in public schools and public institutions of higher education are featured in Tables C-1 through C-4, while three measures of pupil load—pupils enrolled per teacher, pupils in ADA per teacher, and pupils in ADM per teacher—follow in Tables C-5 through C-7.

Average salaries of public classroom teachers and total instructional staff are featured in C-9 through C-22. These average salary data are presented in "current" or unadjusted dollars, and also in "constant" or inflation-adjusted dollars. These computations employ the Consumer Price Index for all Urban Consumers (CPI-U), converted to a school-year basis, using the 1975-76 school year as the base (1975-76=100.0).

The presentation of salary changes in constant-dollar terms enables identification of salary increases attributable to inflation. The resulting picture for most states is a salary gain over the past decade far below what the public may intend or know of. As an advocacy tool, the use of these salary data can do much to dispel myths of huge jumps in the purchasing power of teacher salaries.

Footnotes to C Series tables appear at the end of this section. These notes identify instances where NEA-estimated data appear in lieu of estimates from state education agencies.

NOTES TO C SERIES TABLES

NEA Research estimates for selected variables within the C Series are identified below by state and by table number. NEA estimates appear in those cases where state education departments did not respond to requests by NEA Research for estimates of school statistics.

Alaska	C-1, C-5 through C-22
Arizona	C-1, C-5 through C-22
District	C-9 through C-22
Kansas	C-8
Louisiana	C-6, C-7
Maryland	C-8
Massachusetts	C-8, C-16 through C-22
Michigan	C-8, C-16 through C-22
Mississippi	C-8
Nebraska	C-9 through C-22
Nevada	C-6
New Hampshire	C-16 through C-22
Oklahoma	C-6, C-7
Pennsylvania	C-6, C-7
Vermont	C-1, C-5 through C-22
Wisconsin	C-6, C-7

The following state education departments provided additional information to help explain data reported for their states in C Series Tables:

Ohio — Teacher salaries reported for 1984-85 and 1985-86 do not include supplemental pay.

Texas — Previous estimates of average teacher salaries did not take into account career ladder supplements first awarded to teachers in 1984-85. In 1984-85, approximately 70,000 teachers received supplements of between $1,500 to $2,000 for excellence in teaching.

Utah — Average classroom teacher salaries do not include compensation provided through the state-funded career ladder program, estimated at an average of $858 in 1984-85 and $1,695 for 1985-86.

GENERAL FINANCIAL RESOURCES

Personal income measures the overall economic activity within a specific geographic area. State personal income is defined as the aggregate or total income from *all* sources received by persons residing in a state, and has a significant effect on the total income or financial resources available to governmental jurisdictions through taxation. This, in turn, affects the prospects for financing public education and other services. Indeed, state personal income is used throughout the tables in this report to gauge the ability and effort of states to generate funds for public programs, and is considered by some to present a better method of comparison than the use of state population data for per capita computations.

Tables D-1 and D-2 compare states on their total personal income and the percentage gain in each state. Per capita personal income is featured in Tables D-3 through D-6, providing more detail about the relative financial well-being of individuals within each state through the use of statewide population as a common denominator.

Disposable personal income represents the personal income of residents *minus* taxes and other required payments, such as fines, penalties, and fees. Disposable personal income reflects the amount of income remaining for expenditure on consumer goods, for example, and represents a different measure of "wealth" among states. Tables D-8 through D-10 feature *per capita* disposable personal income, or the amount of personal income for every person in each state, thereby providing some comparability across states for this measure.

Table D-11 compares the states on a measure of personal income geared more closely to the consumers of public education services—the number of pupils as measured in average daily attendance. Table D-13 shows the relative significance of government activity as it contributes to total personal income, by measuring personal income from government enterprises as a percent of the total. Income from farming activities is compared by state in Table D-13, while Tables D-14 and D-15 contain average household buying incomes and retail sales per household, measures similar to disposable personal income in their approximation of consumer spending power in each state.

D-1. TOTAL PERSONAL INCOME, 1984 (IN MILLIONS)

1.	CALIFORNIA	$371,202
2.	NEW YORK	253,934

NOTES TO D SERIES TABLES

NEA Research estimates for selected variables within the D Series are identified below by state and by table number. NEA estimates appear in those cases where state education departments did not respond to requests by NEA Research for estimates of school statistics.

Alaska	D-11
Louisiana	D-11
Nevada	D-11
Oklahoma	D-11
Pennsylvania	D-11
Wisconsin	D-11

GOVERNMENTAL REVENUE

Revenue of state and local governments, principally revenue generated through taxation, is the subject of tables in the E Series. These tables contain comparative information about the amounts and significance of selected tax sources by state, providing insight into the financial resources of government that are available for financing public education.

General revenue, own-source revenue, and tax collections are presented for state and local governments. Revenue data are expressed on a per resident basis, or as proportions of state personal income. The latter expression, found in Tables E-3, E-5, E-9, E-12, E-15, and E-16, indicates that for every $1,000 of personal income in a state, a certain amount of revenue (sales tax revenue, e.g.) is generated. This is referred to as the "tax effort" of government units, and also can be computed for expenditure categories, as shown in Series G and H.

Tables E-13 through E-15 feature state revenue from general sales and from individual income taxes, expressed on a per capita basis and per $1,000 of state personal income. Please note that low amounts appear for several states, indicating that those taxes are restricted in some fashion, such as the income tax on individuals in New Hampshire. Please consult references on state tax characteristics for clarifying information.

E-1. PER CAPITA TOTAL GENERAL REVENUE OF ALL STATE AND LOCAL GOVERNMENTS, 1983-84

SCHOOL REVENUE

F Series Tables compare states on their sources of public school revenue. Funds received by public school districts from federal, state, and from local sources are listed for each state, and are expressed in relation to the number of pupils in each state, to the state's personal income, and according to the percentage distribution across the three government sources.

The tables that follow examine the states' relative positions with regard to school revenues per $1,000 of state personal income (F-3, F-4). These measures, as with the examples in the E Series, make it easier to compare the effort of government units to provide financial support for public school programs through measurement of that support with the common denominator of personal income.

Please note that the school revenue data contained in F Series tables update those featured in *Estimates of School Statistics, 1985-86*, published in April. State education departments have the option of revising their estimated data for inclusion in *Rankings*.

Also, estimated data developed by NEA Research are used in F Series Tables when state education agencies do not provide them. Please note these exceptions in the footnotes following the F Series.

F-1. PUBLIC SCHOOL REVENUE PER PUPIL IN AVERAGE DAILY ATTENDANCE, 1984-85 (REVISED)

1.	ALASKA	$8,585

NOTES TO F SERIES TABLES

NEA Research estimates for selected variables within the F Series are identified below by state and by table number. NEA estimates appear in those cases where state education departments did not respond to requests by NEA Research for estimates of school statistics.

Alaska	All
Arizona	F-3 through F-11
Louisiana	F-1, F-2
Michigan	F-3 through F-11
Nevada	F-1, F-2
New Hampshire	All
Oklahoma	F-1, F-2
Pennsylvania	F-1, F-2
Wisconsin	F-1, F-2

GOVERNMENT EXPENDITURES

State and local government spending characteristics provide useful comparative information about the resources, needs and priorities for public services. Expenditures for government programs vary across states for many reasons, and state-by-state comparisons should be made while keeping them in mind—demographic, economic, and political factors are but a few.

Tables in the G Series describe the spending done by state governments and by state and local governments combined. Expenditure data are expressed on a per capita basis, allowing closer comparison of the differences in levels and objects of state and local government spending, as well as their positions relative to the U.S. average. Use of state personal income in selected tables provides opportunities for comparing the relative "effort" of government units to fund program areas, including public education.

G-1. PER CAPITA TOTAL GENERAL EXPENDITURES OF STATE GOVERNMENTS FOR ALL FUNCTIONS, 1983-84

1.	ALASKA	$7,266.02

SCHOOL EXPENDITURES

Expenditures for public education often are compared among states through the use of measures contained in this section. Expenditures for elementary-secondary schools and for higher education can serve as indicators of state and local government "effort" to fund these services. Examples of measures used to compare states on spending for education include current expenditures per pupil in Average Daily Attendance (ADA) or Average Daily Membership (ADM)—two common measurements of education support. In addition, school expenditure data are displayed in relation to state population, state personal income, as percentages of total state expenditures, or as proportions of national averages.

Expenditure data are shown for elementary and secondary schools in combination with higher education, and with K-12 spending featured separately. Again, knowledge about public education systems and their funding characteristics is required to make fair comparisons of state-local government financial support of education, relative to that found in other states.

State education agency estimates of elementary-secondary expenditures appear throughout tables in H Series. NEA Research estimates were used when state agency data were not provided. Please note these instances in the footnotes section immediately following the series.

H-1. PER CAPITA STATE EXPENDITURES FOR ALL EDUCATION, 1983-84

GLOSSARY

AVERAGE DAILY ATTENDANCE: Average of pupils attending when schools are actually in session.

AVERAGE DAILY MEMBERSHIP: An average of the pupils belonging, those present plus those absent, when schools are actually in session.

BASIC ADMINISTRATIVE UNIT: The local school district; the unit for the operation of elementary and secondary schools or for contracting for school services.

CAPITAL OUTLAY: An expenditure that results in the acquisition of fixed assets or additions to fixed assets, which are presumed to have benefits for more than one year. It is an expenditure for land or existing buildings; improvements of grounds; construction of buildings; additions to buildings; remodeling of buildings; initial, additional, and replacement of equipment.

CURRENT EXPENDITURES: All amounts spent at all levels of administration—state, intermediate, and local—for public elementary and secondary day schools for administration, instructional services, plant operation and maintenance, fixed charges, and other school services (attendance, health services, transportation, food services, etc.). Includes the cost of operating the state department of education and the intermediate (county) departments of education; employers' (state, intermediate, and local) contributions to retirement systems and/or social security on behalf of public school employees; and federal, state, and local funds to cover deficits (gross expenditure less sales) of school lunch and milk programs.

DEBT: The major portion of all state and local government debt is long-term indebtedness. A substantial portion of such long-term debt is nonguaranteed debt, i.e., obligations payable solely from pledged earnings of specific activities or facilities, from special assessments, or from specific nonproperty taxes.

EDUCATION: The provision or support of schools and other education facilities and services.

EFFECTIVE BUYING INCOME: Same as disposable personal income; is obtained by deducting from personal income direct personal taxes and certain other nontax payments to government. The personal taxes deducted include federal, state, and local income taxes, estate and gift taxes, and miscellaneous licenses and permits. Property taxes are not deducted.

ENROLLMENT: A cumulative count of the number of different pupils registered during the entire school year. New entrants are added, but those leaving are not subtracted.

EXPENDITURES: All amounts of money paid out by a government—net of recoveries and other correcting transactions—other than for retirement of debt, investment in securities, extension of credit, or as agency transactions. Expenditures includes only external transactions of a government and excludes noncash transactions, such as the provision of perquisites or other payments in kind. Aggregates for groups of governments exclude intergovernmental transactions among the governments involved.

FALL ENROLLMENT: The count of the pupils registered in the fall of the school year, usually October.

FIRE PROTECTION: Comprises fire-fighting and fire-protection activities of local governments.

FUNCTIONS: Public purposes served by governmental activities (education, highways, public welfare, etc.). Expenditures for each function includes amounts for all types of expenditures serving the purpose concerned.

GENERAL EXPENDITURE: All expenditures of a government other than utility expenditures, liquor store expenditures, and insurance trust expenditures.

GENERAL REVENUE: All revenue of a government except the kinds of revenue classified as utility revenue, liquor store revenue, and insurance trust revenue. All tax collections, even if designated for insurance trust or local utility purposes, are classified under general revenue.

GENERAL SALES TAXES: Sales or gross receipts taxes which are applicable, with only specified exceptions, to all types of goods and services, or all gross income, whether at a single or at classified rates.

HEALTH: Health services, other than hospital care, including health research, clinics, nursing, immunization, and other categorical, environmental, and general public health activities. School health services provided by health agencies (rather than school agency) are included.

HIGHWAYS: Streets, highways, and structures necessary for their use; street lighting; snow and ice removal; toll highway and bridge facilities; and ferries.

HIGHER EDUCATION: Includes facilities and activities of all education institutions beyond the high school level operated by state or local governments, except that agricultural experiment stations and agricultural extension services are classified under natural resources, and university-operated hospitals serving the public are classed under hospitals. These education categories include related services such as pupil transportation, school milk and lunch programs, cafeterias, health and recreational programs, and the like. Revenue and expenditures for school lunch services, dormitories, athletic events, and other auxiliary services are included on a gross basis.

HOSPITALS: Establishment and operation of hospital facilities, provision of hospital care, and support of other public or private hospitals.

HOUSEHOLD: A unit that includes all persons occupying a house, apartment, or room regarded as a dwelling unit, excluding group quarters such as dormitories.

INDIVIDUAL INCOME TAX: Taxes on individuals measured by net income, and taxes imposed on special types of income (e.g., interest, dividends, and income from intangibles).

INSTRUCTIONAL STAFF: Number of positions, not the number of different individuals occupying the positions during the school year. In local schools includes all public elementary and secondary (junior and senior high) day school positions (or full-time equivalents) that are in the nature of teaching or in the improvement of the teaching-learning situation. Includes consultants or supervisors of instruction, principals, teachers, guidance personnel, librarians, psychological personnel, and other instructional staff. Excludes attendance personnel, health services personnel, clerical personnel, and junior college staff. In institutions of higher education includes those engaged in teaching and related academic research in junior colleges, colleges, and universities, including those in hospitals, agricultural experiment stations and farms.

INTEREST ON DEBT: Annual expenditures to pay interest only on long-term debt.

LIVE BIRTHS: Number of births in the U.S.

NONINSTRUCTIONAL STAFF: In local schools includes administrative and clerical personnel; plant operation and maintenance employees; bus drivers; lunchroom, health, and recreational personnel engaged by school systems. In institutions of higher education includes cafeteria workers, clerical and custodial workers in colleges and universities, hospitals, agricultural experiment stations, and farms.

PERSONAL INCOME: State personal income is the current income received by residents of the states from all sources, including transfers from government and business, but excluding transfers among persons. It is a before-tax measure. The total includes nonmonetary income or income received in kind. The figures include income of individuals and also income of nonprofit institutions; private trust funds; and private pension, health, and welfare funds.

POLICE PROTECTION: Preservation of law and order and traffic safety. Includes highway police patrols, crime prevention activities, police communications, detention and custody of persons awaiting trial, traffic safety, vehicular inspection, and the like.

PROPERTY TAXES: Taxes conditioned on ownership of property and measured by its value. Includes both general property taxes (i.e., relating to property as a whole, real and personal, tangible or intangible, whether taxed at a single rate or at classified rates) and special property taxes (i.e., on selected types of property, such as motor vehicles or certain or all tangibles, subject to rates that are not directly related to rates applying for general property taxation).

PUBLIC WELFARE: Support of and assistance to eligible persons contingent upon their need. Excludes pensions to former employees and other benefits not contingent on need. Expenditures under this heading include cash assistance payments directly to needy persons under categorical and other welfare programs; vendor payments made directly to private purveyors for medical care, burials, and other services provided under welfare programs; welfare institutions; and any intergovernmental or other direct expenditures for welfare purposes. Any services provided directly by the government through its hospital and health agencies are classed under those headings.

RESIDENT POPULATION: In addition to those who are residents of an area, the figure also includes armed forces personnel who are stationed in the area.

REVENUE: Revenue receipts for public school purposes from LOCAL, intermediate and other sources include all funds for direct expenditures by local and intermediate districts for school services, for the operation of intermediate departments of education,

for employer contributions to retirement systems and/or social security on behalf of public school employees, for the purchase of materials for distribution of local school districts, etc. Includes net receipts from revolving funds or clearing accounts only when such funds are available for general expenditure by the local board of education. Includes gifts and tuition and fees received from patrons.

Revenue receipts from STATE sources include all funds for the operation of the state department of education, for state (employer) contributions to retirement systems and/or social security on behalf of school employees, for grants in aid to intermediate and local school districts for school purposes (including funds available from state bond issues for such grants and the costs of textbooks, buses, supplies, etc., purchased by the state for distribution to local school districts), for the payment of interest on state bonds issued to provide grants to local school districts, and all other state revenue for public school purposes. Money collected by the state as an agent of a lesser unit and turned over in like amounts to that unit is not included.

Revenue receipts from FEDERAL sources include money distributed from the federal treasury either directly to local school districts or through the state and county, including grants for vocational education, for aid to federally affected areas, for National Defense Education Act programs, for school lunch and milk programs, for educating Indians in local public schools, and money derived from federal forest reserves and federal oil royalties. (No special effort is made to include amount of grants in kind, for example, operation of the school lunch program).

REVENUE FROM OWN SOURCES: All revenue of a government (taxes and other) except intergovernmental.

TAXES: Compulsory contributions exacted by a government for public purposes, except employee and employer assessments for retirement and social insurance purposes, which are classed as insurance trust revenue. All tax revenue is classified under general revenue and comprises amounts received (including interest and penalties but excluding refunds) from taxes imposed by the recipient government. Amounts received by a government from a tax it imposes are counted as tax revenue of that government, even though initially collected by another government; however, any amounts retained are treated as tax revenue of the collecting government. Tax amounts subsequently distributed to other governments are classified as intergovernmental transactions.

TOTAL REVENUE RECEIPTS: Includes all revenue receipts available for expenditure for current expenses, capital outlay, and debt service for public schools, including all appropriations from general funds of federal, state, county, and local governments; receipts from taxes levied for school purposes; income from permanent school funds and endowments; income from leases of school lands; interest on bank deposits; tuition; gifts; etc. Amounts that increase the school indebtedness or that represent exchange of school property for money are excluded.

INDEX TO TABLES

Numbers refer to tables.

Administrative units:
number of, B-1

Average daily attendance:
expenditures per pupil, H-9, H-11
expenditures per pupil as percent of national average, H-10, H-12
number, B-4
percent of fall enrollment, B-7
percent of average daily membership, B-6
personal income per pupil, D-11
pupils per teacher, C-6
school revenue per pupil, F-1, F-2
